KEWEENAW NATIONAL HISTORICAL PARK POSTCARDS/TEXT.

“C & H Stamp Mill ca. 1890s. The Calumet & Hecla (C & H) stamp mills operated from 1868 to 1946. The mills used heavy stamps and grinders to break mine rock into fine pieces. Other machines then separated the heavier copper particles from the lighter rock. Water carried the copper and rock from machine to machine. From the mill, the copper was sent to a smelter where it was melted and poured into ingots. C & H mill remains can be found in Lake Linden near the Houghton County Historical Society property. Photographer Adolph F. Isler. Keweenaw National Historical Park Archives, Jack Foster Collection.” \$0.30

“Calumet’s Fifth Street - March 20, 1899. Fifth Street in the town of Calumet (formerly Red Jacket), Michigan was the social heart of the Calumet & Hecla copper mining district. Today this street is a designated Historic Landmark District within the boundaries of Keweenaw National Historical Park, and still serves as a downtown business area. Calumet is also known for its large snowfalls, as seen in this photo. Photographer Adolph F. Isler. Keweenaw National Historical Park Archives, Jack Foster Collection.” \$0.30

“Miners with Mass Copper - Quincy Mine ca. 1925. Miners operate a pneumatic chisel on a mass copper piece. Mass copper had to be blasted from the rock and then cut into smaller pieces. Prior to 1906, the task of cutting mass copper was done by hand, using sledges with special chisels. Photograph by N. A. Eilertsen. Keweenaw National Historical Park Archives, Louis Koepel Collection.” \$0.30

The installation of the hoist enabled the Quincy Mining Company to raise rock from 9,260 feet below the surface, the deepest mine shaft in the world at that time. Photographed by Engineer Ray W. Armstrong. Keweenaw National Historical Park Archives, Louis Koepel Collection.” \$0.30
